Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant felt the hanger of Dossett '304 with a thinned second portion would destroy the functionality thereof. More specifically, the applicant contended that due to the thinned second portion, the packages (20) would no longer be in alignment prior to hanging on display hangers (60). While it is nearly impossible to completely confirm or deny such an assertion, it appears such an assertion carries little weight since the width of the hanger is not being changed, and it appears from figure 4, for instance, that the width dimension of the hanger would affect the alignment of the packages. Further, the rubber band (70) as mentioned in column 4 would inherently further ensure alignment of the packages. Finally, the applicant alleged that there is no teaching or motivation to modified the first, second and third portions to be of different thicknesses. As mentioned in the office action, absent reasoning in the specification as to why such dimensions are critical to the functionality of the invention, doing so is considered a design choice and hence not patentable. It is additionally noted that the Examiner's SPE agreed that absent a clear teaching in the application as to the criticality that the first portion thickness be different than the third portion thickness, an obviousness rejection as set forth in the previous office action would be maintained.
